4 How to download Public SSL Certificates

To connect to the Foriba Cloud system, follow the link <http://api.fitbulut.com> and click the Download SSL Certificates button.

In the .zip file you downloaded, two different folders will be displayed as below.

Name	Date modified	Type	Size
 09.05.2019-11.08.2021	2.06.2026 09:16	File folder	
 14.05.2026-29.11.2026	2.06.2026 09:17	File folder	
 14.07.2021-15.07.2022	2.06.2026 09:16	File folder	

Open the certificate folder you want to install, and then check that the files are on your computer.

Name	Date modified	Type	Size
 AAA Certificate Services.cer	3.07.2023 13:56	Security Certificate	2 KB
 fitbulut.com.cer	2.06.2026 09:15	Security Certificate	2 KB
 Sectigo RSA Organization Validation Secu...	7.07.2025 17:36	Security Certificate	2 KB
 USERTrust RSA Certification Authority.cer	7.07.2025 17:36	Security Certificate	2 KB

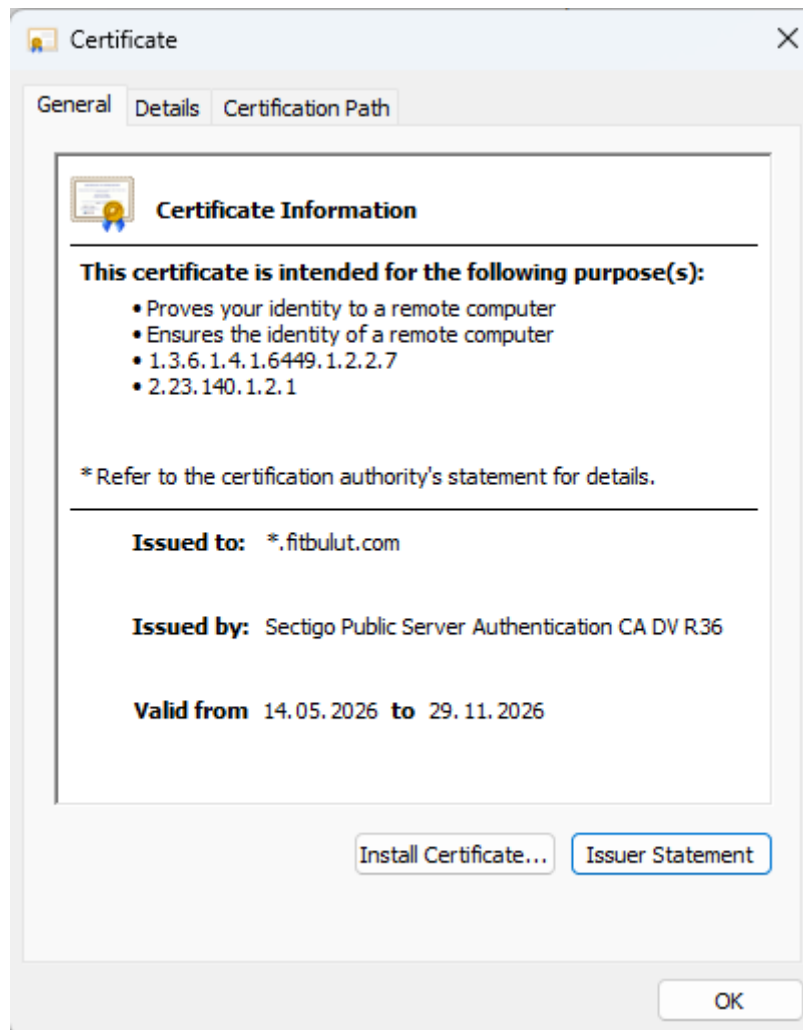

5 Install Certificates in the Certificate Store

After you ensure that the certificates are downloaded correctly to your computer, you must perform the certificate installation process in the following order.

P.S. : Repeated installation of certificates has no adverse effect on the server. If you have the corresponding root certificate as your old version on your server, you will have both versions available.

5.1 Installing Root Certificates in the Windows Certificate Store

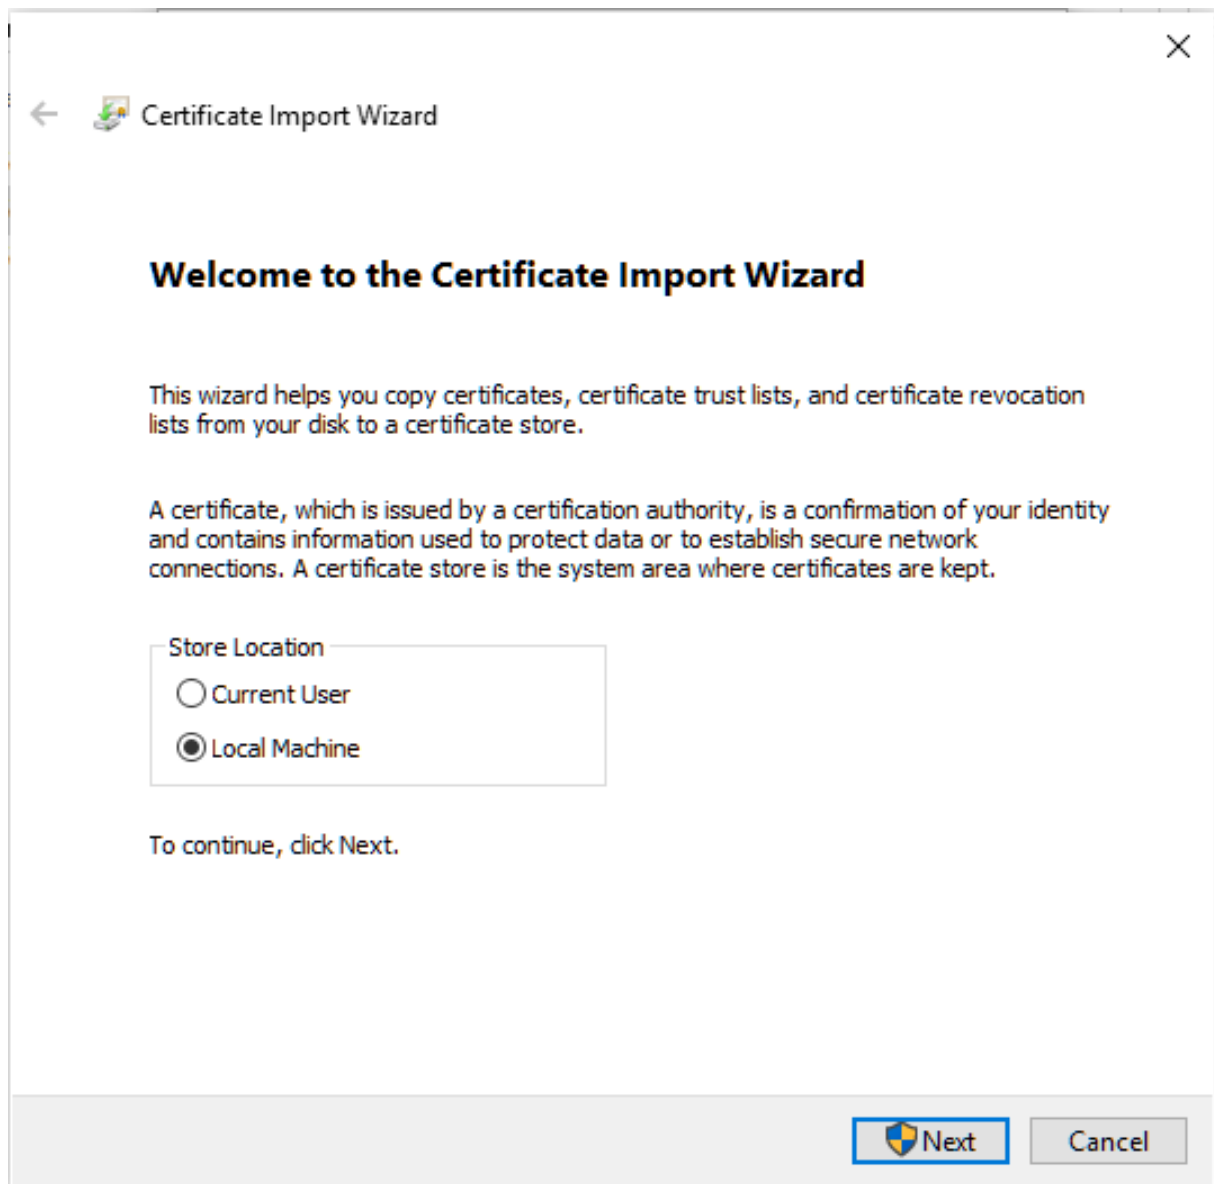

Open the certificate summary window by double-clicking on the certificate file you want to install.

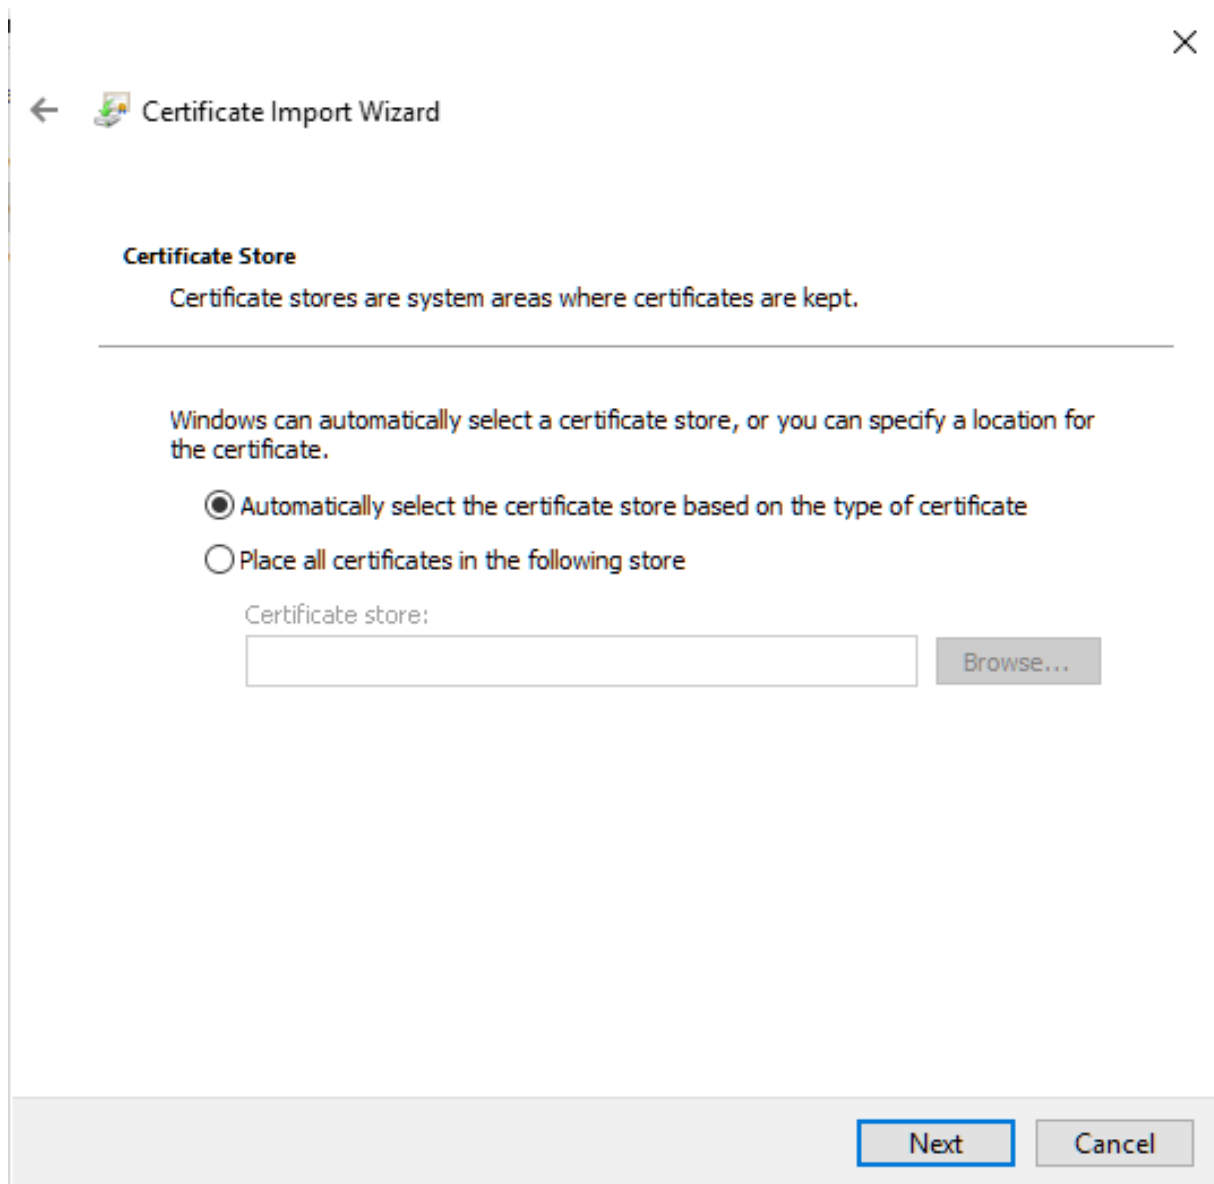

The certificate window will appear as above. From this screen, you can open the certificate installation wizard by pressing **Install Certificate**.

P.S. : You must have administrator right to do this.

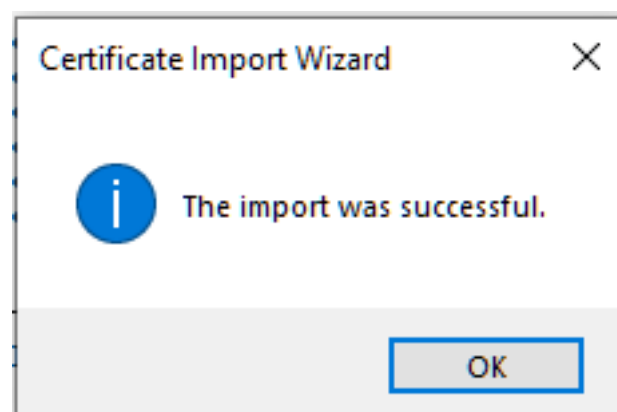

The Certificate installation wizard will start with **Current User** selected by default. If we want to make the installation process valid as a **machine-wide**, you should update it as **Local Machine** from the relevant screen and click Next.

After pressing the Next button, the Store related options will be listed, where the certificate will be loaded. Windows can automatically select which Certificate Store to install by certificate type. The recommended option is to leave the ***Automatically select the certificate store based on the type of certificate***. When you select it this way and click Next, it will be automatically uploaded to the appropriate certificate store based on the type of certificate.

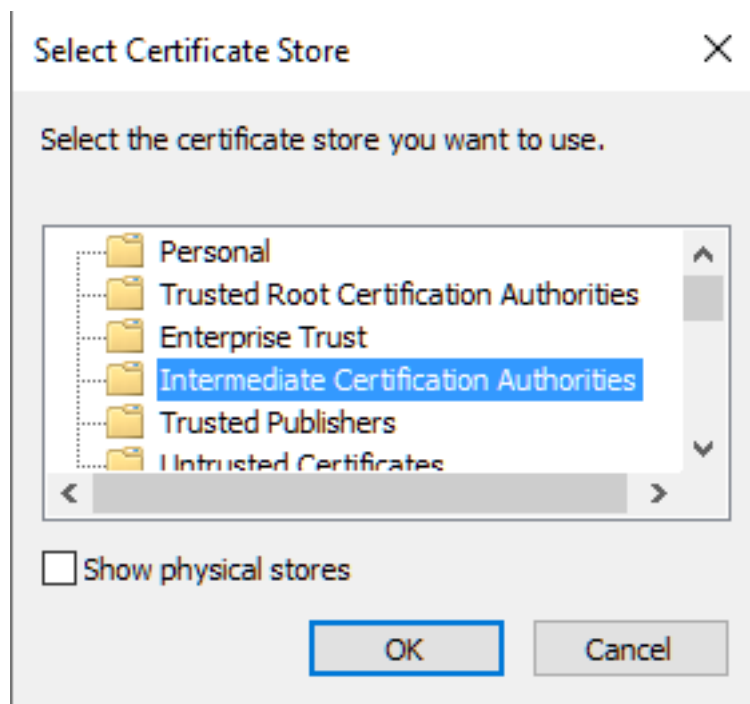

After this step, a summary is displayed and if you press the Finish button, the relevant certificate is installed in the appropriate certificate store on your server. The result statement will be as follows.

5.2 Install Certificate in a Custom Certificate Store

If you want to install the certificate that you want to install to a custom certificate store rather than to an automatic certificate store, you must select ***Place all certificates in the following store*** in the second step of the Certificate installation wizard, and then click the Browse button to select the appropriate certificate store.

After selecting the relevant certificate store, you can press OK to click Next and finish the certificate installation as described in the previous step.
